Memoria TFM

Análisis y predicción del retraso en los vuelos

Ester Llorente San Juan

1. Introducción

El objetivo de este Trabajo Fin de Master no es más que el de aplicar las distintas técnicas aprendidas en el V-Master de Data Science con el fin de analizar y predecir el retraso y el tiempo de retraso en los vuelos comerciales de EE.UU.

Se define como retraso de vuelo cuando un vuelo de una aerolínea despega y aterriza más tarde que su hora programada. La Administración Federal de Aviación (FAA) considera que un vuelo se retrasa cuando aterriza 15 minutos más tarde de su hora programada. Una cancelación ocurre cuando la línea aérea no opera el vuelo por una cierta razón.

En Estados Unidos, cando los vuelos se cancelan o se retrasan, los pasajeros pueden tener derecho a una indemnización debido a la reglas obedecidas por cada compañía de vuelo. Estas reglas generalmente especifican que ante una cancelación, los pasajeros pueden tener derecho a ciertos reembolsos, incluyendo una habitación gratis, si el próximo vuelo es al día siguiente del vuelo cancelado, reembolso, cambio de ruta, llamadas telefónicas y refrigerio.

Cuando un vuelo se retrasa, el Departamento de Transporte impone una multa de hasta \$27,500 por pasajero, para los aviones que quedan en pista durante más de 3 horas sin despegar (cuatro horas para vuelos internacionales). En los Estados Unidos, los pasajeros no tienen derecho a una compensación cuando se produce un retraso, ni si quiera un recorte de tarifas. Las compañías deben de pagar los costes de alojamiento de los pasajeros si la demora o cancelación es por su culpa, pero no es así si las causas están fuera de su control, como el clima.

Desde 2003 la Oficina de Estadística de Transporte de los Estados Unidos ha estado haciendo un seguimiento de las causas de los retrasos en los vuelos. El número de retrasos en los vuelos ha aumentado ya que el personal ha sido reducido debido a los problemas financieros que siguieron a los ataques del 11 de Septiembre.

Los retrasos se agrupan el 5 categorías (Aerolínea+Turnaround local, Tiempo Extremo, Aeronaves que llegan tarde o retraso reaccionario, Seguridad y Sistema ATM), siempre teniendo en cuenta que para que se contabilice un retraso en una categoría causal, este retraso ha de haber sido mayor a 15 minutos. Algunas de las causas de los retrasos o cancelaciones de los vuelos incluyen:

- Problemas técnicos de la aerolínea (la causa principal de las demoras en los vuelos)
- Congestión en el tráfico aéreo.
- Terremotos y Tsunamis (por ejemplo, en caso de terremoto y tsunami en el Océano Índico en 2004, terremoto en Chile en 2010 y el terremoto y tsunami en Töhoku en 2011).
- Clima inclemente, tormentas eléctricas, huracanes o ventiscas.
- Acumulación de retraso en las salidas por demoras en las llegadas.
- Problemas de mantenimiento con la aeronave.
- Ataques terroristas (por ejemplo, los bombardeos suicidas de Bruselas en 2016, y el ataque al aeropuerto de Atatürk en 2016).

Para la creación del estudio se utiliza los datos históricos del Departamento de Transporte de los Estados Unidos (US DOT), obtenido de https://www.transtats.bts.gov/DL_SelectFields.asp

2. Descripción de los datos.

\$ LongestAddGTime

Para la realización del análisis, se han descargado datos para los meses de Enero y Febrero de 2014 del US DOT por tener el mayor porcentaje de retrasos 25,43% y 23,56% respectivamente, con un total de 23,02% de vuelos retrasados en ese año.

Se ha realizado un preprocesamiento de los ficheros descargados que incluye: Lectura de los ficheros, y Limpieza, Análisis y tratamiento de los datos.

El dataset descargado contiene en total 902551 objetos y 110 variables, como se puede observar a continuación:

```
> str(flightsAux)

Este dataset, está compuesto por datos de tipo int, chr, num y logi.

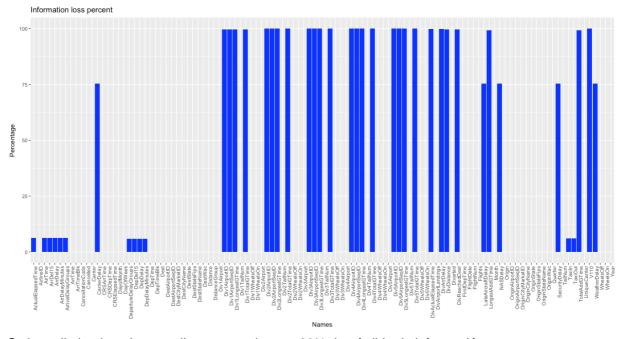

Se han tratado las variables para poder realizar un análisis del dataset. Ejecutando el comando summary, después de ese tratamiento (las variables que se muestran en rojo, han sido eliminadas) se obtiene:

```

 Muchas de las variables contienen una elevada pérdida de información como se puede observar en la siguiente imagen:

Se han eliminado todas aquellas que contienen >99% de pérdida de información:

	Names	Percent		Names	Percent		Names	Percent
1	TotalAddGTime	99.34585	10	DivArrDelay	99.82195	19	Div4AirportID	100.00000
2	LongestAddGTime	99.34585	11	Div2AirportID	99.99247	20	Div4AirportSeqID	100.00000
3	Div1AirportID	99.67470	12	Div2AirportSeqID	99.99247	21	Div4TotalGTime	100.00000
4	Div1AirportSeqID	99.67470	13	Div2TotalGTime	99.99247	22	Div4LongestGTime	100.00000
5	Div1TotalGTime	99.67470	14	Div2LongestGTime	99.99247	23	Div5AirportID	100.00000
6	Div1LongestGTime	99.67470	15	Div3AirportID	100.00000	24	Div5AirportSeqID	100.00000
7	DivReachedDest	99.70982	16	Div3AirportSeqID	100.00000	25	Div5TotalGTime	100.00000
8	DivDistance	99.71115	17	Div3TotalGTime	100.00000	26	Div5LongestGTime	100.00000
9	DivActualElapsedTime	99.82195	18	Div3LongestGTime	100.00000	27	V110	100.00000

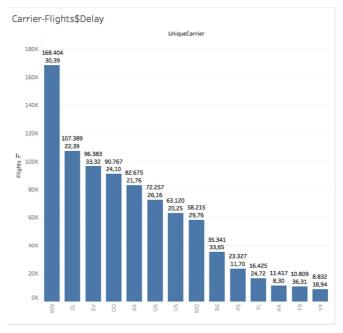

- Existen 54571 vuelos cancelados que han sido eliminados puesto que son operaciones no realizadas. También se han eliminado sus correspondientes variables: Cancelled y CancellationCode por no aportar información para el análisis.
- Existen 2619 vuelos desviados que han sido eliminados. Al tratarse de vuelos no programados (puesto que no aterrizan en el destino programado), no registran el retraso y por tanto no son de utilidad para el análisis. También se han eliminado sus correspondientes variables: Diverted, DivAirportLandings, Div1Airport, Div1WheelsOn, Div1WheelsOff, Div1TailNum, Div2Airport, Div2WheelsOn, Div2WheelsOff, Div3TailNum, Div3Airport, Div3WheelsOn, Div3WheelsOff, Div3TailNum, Div4Airport, Div4WheelsOn, Div5WheelsOff, Div5TailNum, Div5Airport, Div5WheelsOn, Div5WheelsOff y Div5TailNum por no aportar información para el análisis.
- La variable Quarter contiene el cuarto de año al que corresponde el mes, al no ser relevante para el análisis, se ha eliminado.
- Cada UniqueCarrier tiene un único AirlineID asociado, por tanto se ha eliminado esta última.
- La variable Carrier contiene la misma información que UniqueCarrier, por tanto se ha eliminado.
- Cada Origin tiene un único OriginAirportID asociado, por tanto se ha eliminado esta última.
- Cada OriginState tiene un único OriginStateFips asociado, por tanto se ha eliminado esta última.
- Cada OriginState tiene un único OriginWac asociado, por tanto se ha eliminado esta última.
- Cada Dest tienen un único DestAirportID asociado, por tanto se ha eliminado esta última.
- Cada DestState tiene un único DestStateFips asociado, por tanto he eliminado esta última.
- FirstDepTime tienen una pérdida de información del 99.38795% >99%, después de haber eliminado los vuelos cancelados y desviados, por tanto se ha eliminado.
- Cada DestState tiene un único DestWac asociado, por tanto se esta última.
- Representando algunos de estos datos en Tableu se puede ver:
 - La distribución de los vuelos a lo largo de los días del mes es más o menos uniforme exceptuando los últimos días del mes (esto puede ser debido a que la muestra únicamente tiene los meses de Enero y Febrero), se indica también el porcentaje medio de los vuelos retrasados de cada uno de los días:

 La distribución de los vuelos a lo largo de la semana es más alta entre semana que el fin de semana, también se indica el porcentaje medio de los vuelos retrasados:

 En la distribución de vuelos por compañía se observa que la compañía WN (Southwest Airlines), DL(Delta Airlines) y EV(Express Jet) son las compañías que más vuelos realizan pero las compañías F9 (Frontier Airlines), B6(JetBlue Airways) y EV son las que mayor porcentaje medio de vuelos retrasados tienen:

• En la siguiente distribución se han ordenado las matrículas por el número de vuelos realizados y el color y tamaño de las barras indican el porcentaje medio del número de vuelos retrasados de esta:

 A través del siguiente mapa, se puede observar que los aeropuertos con más vuelos son: ATL-Aeropuerto Internacional Hartsfield-Jackson de Atlanta, Georgia; DFW-Dallas/Fort Worth Interntional Airport de Dallas y Fort Worth, Texas; y ORD-Aeropuerto Internacional O'Hare de Chicago, Ilinois:

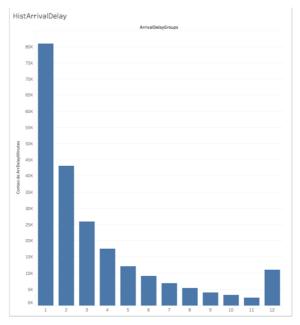

También que los estados con más vuelos son: CA-California, TX-Texas y FL-Florida.

• En la siguiente distribución se puede observar la relación entre la hora de salida el vuelo y el tiempo de retraso en la llegada.

• En este último, se puede observar un histograma de los vuelos que tienen más de 15 minutos de retraso (que son los vuelos considerados como retrasados) clasificado por el grupo de retraso:

Los intervalos de retraso van desde el 1 (15 minutos de retraso) hasta el 12 (>180 minutos de retraso).

Nos interesa conocer cómo es la distribución de los vuelos con más de 180 minutos de retraso, puesto que estos nos pueden modificar la media en el caso de los outliers.

3. Metodologías

Se ha dado respuesta a dos problemas:

- 1. Predicción de vuelos retrasados en la llegada
- 2. Tiempo medio de retraso.

Los pasos seguidos en orden para el tratamiento de los datos están incluidos en los siguientes archivos:

 1_FileDataProcessing.R: En el cual se realiza la lectura de los ficheros, una primera limpieza, análisis y tratamiento de los datos.

Se eliminan todas aquellas variables que contienen una pérdida de información de más de 99%.

Se analizan los datos y se eliminan los vuelos cancelados por ser vuelos no operados y los vuelos desviados por no ser vuelos programados y no contener información para el dataset a analizar.

Se tratan las variables dándolas su correspondiente formato.

Se hace una copia de dataset (flightsDileDataProcessing) y se guarda el resultado en un fichero flights.csv.

• 2_InputData.R: En el cuál se realiza un segundo análisis del dataset. Se eliminan las variables que no tienen relevancia para el problema a resolver y se toma la decisión de qué hacer con aquellas variables que contienen NA's (pérdida de información).

Se hace una copia del dataset (finalflights) y se guarda el resultado en un fichero finalflights.csv.

3.1. Predicción de vuelos retrasados en la llegada:

La solución para este problema de clasificación se encuentra en el archivo: 3_ClassificationModels.R.

Para solucionar este problema de clasificación, me he centrado en la variable ArrDel15 con valor 1, que es la que indica aquellos vuelos que tienen retraso (mayor que 15 minutos) en la llegada.

Para realizar el estudio, he decidido asignar pesos a las variables categóricas y normalizar el resto de variables.

Una vez se han asignado los pesos a las variables categóricas y se han normalizado el resto de variables he guardado el dataset resultante flightsWeights en un fichero flightsWeightsClassi.csv.

He utilizado los modelos de Regresión Logística y Random Forest para determinar cuáles son las variables que más influyen en el retraso de los vuelos. Y la Matriz de Confusión y Precisión/Recall para determinar qué modelo es el que da las mejores predicciones y realiza la mejor clasificación.

3.2. Tiempo medio de retraso:

La solución para este problema de regresión se encuentra en el archivo: 4_RegressionModels.R.

He generado un nuevo dataset flightsDelay que contiene únicamente los vuelos retrasados (ArrDelay = 1).

He analizado los outliers que existen por encima del percentil 95 y he prescindido de ellos para el estudio.

He asignado pesos a las variables categóricas y posteriormente las he normalizado.

Una vez asignados los pesos y normalizadas todas las variables, he guardado el dataset resultante flightsDelayWeights en un fichero flightsWeightsRegression.csv.

He utilizado los modelos de Regresión Lineal y Random Forest con el fin de encontrar el modelo que tenga el error más bajo y prediga mejor el tiempo de retraso. Y las métricas MAPE y RMSE para decidir qué modelo reporta mejor resultado.

4. Conclusiones

Las variables que más influyen en el retraso de los vuelos de llegada (en orden de mayor a menor influencia) son:

- El retraso de salida (DepDelay).
- La hora de salida (DepTime).
- La matrícula (TailNum).
- El número de vuelo (FlightNum).
- El día del mes (DayofMonth).
- El aeropuerto de destino (DestAirportSeqID).
- El estado de origen (OriginState).
- El día de la semana (DayofMonth).
- La distancia (DistanceGroup).
- La compañía (UniqueCarrier).

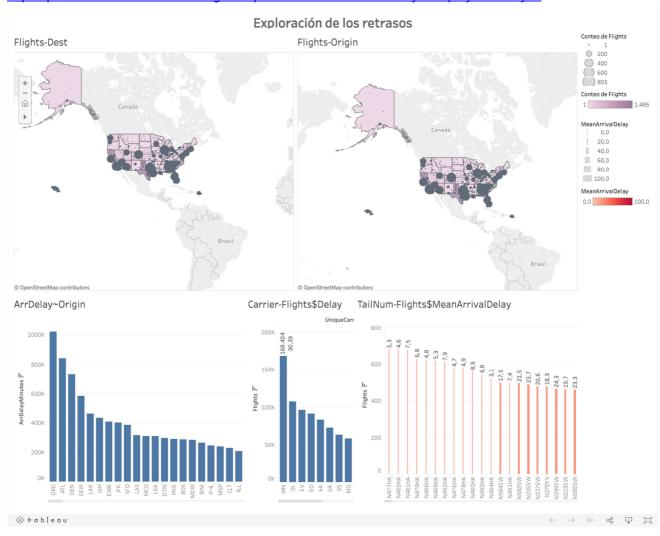

A la hora de predecir el tiempo medio de retraso de un vuelo, la media de porcentaje de error es del 26%.

Futuras mejoras que se pueden realizar sobre el análisis y que no se han llevado a cabo por falta de tiempo:

- Añadir las condiciones meteorológicas y el impacto de estas.
- Analizar cada uno de los grupos de retrasos y la repercusión económica.
